Highlights of Changes in 5.1.6.20

ID: 17576 Support bind POS UserID with Accounting UserID.

User can now assign Accounting UserID to POS UserID for the audit trail purpose. Example, user want to know which POS User created this certain member at Frontend so that they can trace by audit trail.

To assign the UserID, go to **Point Of Sales > Maintenance > POS User Maintenance**.

ID: 18230 Remove unvoid function.

Starting with this version, user can no longer unvoid their transaction after they had voided. The concept is same as E-Wallet payment transaction. This is due to user can void and unvoid at any time for certain transaction will cause unnecessary problem toward their sales.
