

# Gif Making Workshop

## GIPHY gif maker

1. Go to <http://giphy.com/create>
2. Upload image or video to get started.
3. We're going to check out all four tabs

1. Add a caption
2. Add stickers
  - i. Try searching for, Anarchism, Fire, Heart
  - ii. Look under categories
3. Check out filters
  - i. My favs are Bad TV and Glitch
4. Draw tab is fuuunnn
  - i. Draw with stickers
  - ii. Draw with sparkles

## GIPHY Capture

GIPHY Capture only works on Macs :( If you have a windows computer, skip to GIPHY cam!

1. Download GIPHY Capture at <https://giphy.com/apps/giphycapture>
2. Find a video somewhere you want to turn into a gif
3. Capture it by moving the giphy capture window over the video and pressing the red record button

4. Press stop to finish recording

5. Once you've recorded a gif, there are some editing options, click on the image of your gif in the draw to open its edit window.

6. You'll see some options below your gif

7. In the options tab...
  - a. Try trimming your gif using the tabs on the purple bar
  - b. Try the different loop types
8. In the Captions tab...
  - a. Try making text with different sizes, colors and animations!
  - b. Try add more than one caption that show up in order.

## GIPHY Cam

1. Download GIPHY Cam by searching the App store or play store for GIPHY Cam, or going to <https://giphy.com/apps/giphycam> on your phone.
2. Try all the filters!
3. Try added silly animal stickers
4. Try some frames and faces
  - a. Don't want to take a picture of yourself? Pro-tip: take a picture of a blank wall and just use filters/stickers to make it cool looking.
5. There are two modes for capturing a gif, burst and video. Try both!
  - a. Burst: tap the record button once, the app will take a series of images
  - b. Video: Press and hold and the app will take a video to make the gif
6. Once you've captured a gif, you can keep editing/adding to it!
  - a. Tap the Plus in the upper right hand corner of your gif.

## Piskel

1. Go to <https://www.piskelapp.com/>
2. Click "Create Sprite"
3. Draw your first frame!

4. Click “Add new frame” on the left to add a second frame:

5. You should now see an animated preview on right upper right!  
a. Click “1x” to change to a bigger preview mode.

6. Now save your work! You don't want to lose your masterpiece!  
a. Look for the floppy-disk/save button on the right.  
b. You can either save in your browser, or create an account (by clicking sign in in the upper right) and save to your gallery.

7. Play around with some of the other drawing tools  
a. Colors, Bucket, Rectangle, Circle  
b. Some tools have advanced options, check those out if you want!  
8. When your animating, it's nice to see the previous frame

- a. To see a light image of the frame before the one your editing, click the onion under the gif preview

9. Need a little more space? Try the resize panel!

10. Once your amazing gif is done, it's time to export it.

- a. Look for the Export panel on the right

- b. Depending on the size of your gif, you might want to change the scale to be 3 or 4

This will give it a pixelated style when uploaded other places, and it won't look blurry!

- c. Click download and you've got your gif!

11. Now you can share or upload your gif wherever you'd like!

- a. Uploading it to giphy is great, because they handle turning it into whatever format you need for other platforms.
